## 1. Project Background

2. Medicines constitute an extremely important and considerably large component of health and medical care services in the public health sector in our city. Government and Citizens spends a sizeable amount of the total health budget for medicines. The budgetary allocation for procurement of medicines showed a significant increase over the previous years to ensure greater availability of generic medicines for free supplies to a large section of patients treated in the government hospitals. However, despite such importance attached to medicines, the government is still confronted with issues of greater access to good quality of medicines by the people at affordable cost, as well as, an organized supply and delivery system to cater to the needs of the people at decentralised levels in accessible in periphery of their residence specially near primary, secondary and tertiary health care facilities across the state.
3. In the above scenario, patients are dependent, to a large extent, on the private retail pharmacy outlets operating near by the hospitals/ nearby residence / prominent commercial area. Information and reports indicate that these retail outlets have sizeable business volume through the sales of a range of branded medicines at market price to the patients seeking treatment in these government and private hospitals. The Hospital Authorities have neither any control on the pricing of these brands to make these available at lower than the market price and at affordable cost to the patients of the hospital nor can institute its own monitoring mechanism to check, on an ongoing basis, the quality of the medicines being sold in these outlets.
4.
